

Abstract

Sustained release pharmaceutical compositions comprising at least a
5 cephalosporin antibiotic, a mixture of polymers comprising of galactomannans
and neutral swellable polymers, and other pharmaceutically acceptable
excipients are described. The composition comprises about 30% to about 90%
by weight of a cephalosporin antibiotic; about 1% to about 30% by weight of
said mixture of polymers comprising from about 0.1% to about 15% by weight
10 of galactomannans, and about 0.1% to about 15% of neutral swellable polymer
by weight of sustained release composition.
